

# Control Flow

Comparisons happen first.

logical comes next

so you can do

$x < 3$

(you don't have to use parentheses)

---

if expr:

...

elif expr:

...

else :

...

input() always gives  
a string

Python supports bounds:

if  $90 \leq \text{grade} \leq 100$ :

Match statement

Match ... :  
    ↓ any object  
    case ... :
